

DR. STARK'S SURGERY CENTER

The City of Indianapolis hired RATIO to prepare plans for the enhancement of the Wholesale District streets on the southeast corner of the mile square. The project consisted of three phases, all of which focused on different streets in the district. Sidewalks, lighting, trees and other site amenities were designed to maintain the urban aesthetic of the area while providing a safe and comfortable environment in which to work. The project was successful in causing the 1880s era infrastructure to be brought closer to the 21st century state of condition. All three phases of the project were funded by Federal Transportation Enhancement Grants.
