

INDOOR GOLF PRACTICE FACILITY

The new 15,500 square foot facility incorporates three key elements: a student reception / lounge / study space, multiple hitting bays, and a large interior chipping, pitching, and putting green area. Two of the six hitting bays include video systems for student swing analysis. Support elements for the facility include locker rooms for both teams, coaches offices, a small kitchenette, a team stretching room, and a club repair room. In addition, the facility utilizes an air conditioning system capable of maintaining heating and cooling within the chipping / putting green space. The new facility includes an exterior terrace space adjacent to the lounge which is used for social functions between the alumni and current team members, and for team meetings when the weather permits. Approximately thirty parking spaces are provided to serve the new facility.
